

WELCOME TO OUR NEW .BANK DOMAIN

CBL made the move to .Bank for an even more secure banking experience. You will now see .Bank in all of our email addresses and in our website url.

What is .Bank?

.Bank is a secure domain exclusively for verified banks that ensures authentic communication via bank email addresses and website URLs, providing confidence, trust, and security.

How do I know if a bank is officially verified?

The domain for the url and email addresses will be .Bank. Also, you can look for the official verified logo and website tag. 

Why is .Bank more secure?

.Bank verifies all banks and mandates and monitors for compliance with the Security Requirements. The .Bank cue adds visual authentication, enhancing protection against the most common cyber attacks that can lead to identity theft, business email compromise, and fraud.

Do I need to do anything differently with .Bank?

Our previous website domain forwards to .Bank, but it would be good practice to change any bookmarks that you created and any email addresses that you have saved from bank correspondence.
